

Research data.

B. No. 2

Investigation on the differential
fertility by marriage ages, duration
of married life, level of education,
occupations and economic ranks of
husband and wife.

-- surveyed in 1940 --

by

A. Okazaki.

Institute of Population Problems,
Welfare Ministry.
Tokyo, Japan.

The preface.

In order to clear the actual state of the fertility from the point of social economic view the necessary matters concerning the following 100,000 husbands and wives in employment were investigated in the main prefectures on Jan. 20, 1940, and in the result about 71,000 effective votes were acquired.

1. Salaried staff.
2. Industrial wage earners.
3. Agricultural workers.
4. The self-employed of the middle size or small commerce & Industry.
5. The destitute.

(A) The first observation on the above data shall be made for total amount of the effective votes (71,606 married couples) and next).

(B) Only married couple whose period capable having child has been over (the first marriage person, and more than forty-five years of the wife's age) shall be chosen among the total amount of effective votes and researched in order to grasp more accurately the real circumstances of the fertility.

A. Analysis of the total amount of effective votes.

At first, the research shall be made in view of the biology which is the foundation of the fertility, and then shall enter into the social economic analysis.

- 1) Differential number of husbands & wives by the duration of the married life and number of their childbirths shall be as follows:

Table 1. Differential number of husbands & wives by the duration of the married life and number of their childbirths.

Duration of the married life	Number of married couples	Number of live-born children	Number of still-born children	Number of childbirths per babies per married couple	Number of alive-born babies per married couple
Less than					
1 year	1,106	226	8	0.2	0.2
1 year	2,543	1,404	47	0.6	0.6
2 year	2,953	2,469	69	0.9	0.8
3 year	2,979	3,495	104	1.2	1.2
4 year	3,185	4,551	97	1.5	1.4
5 year	3,038	5,342	113	1.8	1.8
6 year	2,750	5,607	125	2.1	2.0

7 year	2,509	5,816	118	2.4	2.3
8 year	2,707	6,874	123	2.6	2.5
9 year	2,689	7,392	159	2.8	2.7
10 year	2,666	8,029	159	3.1	3.0
11-15 year	12,555	44,910	901	3.6	3.6
16-20 year	10,278	46,048	989	4.6	4.5
21-30 year	11,636	58,781	1,355	5.2	5.1
31-40 year	5,269	27,433	656	5.3	5.2
Over 41 year	2,743	14,022	320	5.2	5.1
Average	71,606	242,399	5,343	3.5	3.4

Namely, it shows clearly the difference in the fertility caused by the length of the duration of married life, and as the total number of child-births and the number of live-born children are almost same, the following tables shall present the number of live-born children only.

Further, the following table shows the differential number of live-born children per married couple by the duration of the married life and by the wives' marriage ages.

Table II. Differential number of live-born children per married couple by the duration of the married life and by the wives' ages classified.

(1).

Wife's marriage age	Duration of the married life	less than 16-	17-	18-	19-
		16-year	year	year	year
less than					
1 year	0.2	--	0.2	0.2	0.3

4) Differential number of live-born children per married person by the duration of married life and by the economic ranks.

Investigation on the differential fertility by the economic ranks of salaried staff in cities which are further devideed into district and occupation is shown in the following tables.

a) Differential number of live-born child per married couple by the duration of married life and by the economic ranks of salaried staff in cities.

Inhabitants of cities are as follows; however, since the earnings vary according to the lapse of time, in case such as the fertility of 100 yen earner shall be shown, his actual earning at that time was investigated.

Table V (1) Differential number of live-born children per married couple by the duration of married life and the economic ranks of salried staff in cities.

economic rank	less than 50 yen	more than 50 yen but not exceed 100 yen	more than 100 yen but not exceed 150 yen	more than 150 yen but not exceed 200 yen	more than 200 yen but exceed 200 yen	more than 300 yen

21 - 30 "	4.4	6.1
31 - 40 "	4.8	5.5
Over 41 "	5.6	6.5
Average	4.1	4.6

"Class of the rich" here shall be construed to mean those who pay in over ¥ 1,000 of Income Tax of 3rd class, and "Class of the needy" those prescribed by the then Tokyo Municipal Office in Tokyo Metropolis. Therefore, within the scope of this survey, it may be noted that, according to the classification by classes of income, the more is the income, the higher is the birth-rate, though, for example, with the exception of landed proprietor, and that, throughout the social-economic field of vision, the differences by areas are found more than professions and incomes.

B. Analysis on the Married Couples after the Elapse
of the Period of capable of Pregnancy.

1) The figures are as follows; compared with the cases under A, the number of live-born children per married couple is naturally high. (4.64 persons under B to 3.4 persons under B.)

Table, No.6.

Number of Married Couples and Number of Live-born Children classified by Occupations.

	Number of Married couples	Number of Live-born children	Number of Live-born children per married couple
Total number	18,320	85,079	4.64
Salaried men in cities	959	3,930	4.10
Salaried men in agricultural villages	559	2,268	4.06
Waged Laborers in cities	1,603	6,566	4.10
Waged Laborers in agricultu- ral villages	810	3,534	4.36
Farmers	10,540	52,482	4.98
Fishermen	575	2,083	4.04
Small & Medium business men & industria- lists in cities	1,183	4,933	4.17
Small & medium business men & industria- lists in agri- cultural villa- ges	1,305	5,221	4.00
Class of the rich	493	2,232	4.53
Class of the needy	353	1,830	5.18

2) Number of Live-born Children per Married Couple, classified by Classes of Income.

The result of the observation of this, classified by income of the husbands, is as follows.

a) Salaried men & waged laborers.

Table, No. 7-1.

Number of Live-born Children per Married Couple, classified by Class of Income of Husbands in the Cases of Salaried Men and Waged Laborers.

	Salaried men in cities	Salaried men in agricultur- al villa- ges	Waged La- borers in cities	Waged La- borers in agricul- tural vil- lages	Average
Under ¥ 50	4.50	4.01	4.04	4.36	4.28
¥50 - under ¥100	4.20	4.13	3.95	4.28	4.04
¥100 - under ¥150	3.92	3.90	4.40	6.33	4.26
¥150 - under ¥200	3.92	4.43	4.21	8.00	4.06
¥200 - under ¥300	3.98	4.24	5.33	8.00	4.06
Over ¥300	4.26	3.90	-	Over ¥300	4.19

b) Farmers

Table, No. 7 - 2.

Number of Live-born Children, classified
by Areas under Cultivation in the Case of Farmers

Number of live-born children	
Under 5 <u>tan</u>	4.32
5 <u>tan</u> - under	
1 <u>cho</u>	4.92
1 <u>cho</u> - under	
2 <u>cho</u>	5.47
2 <u>cho</u> - under	
3 <u>cho</u>	5.96
Over 3 <u>cho</u>	6.18

c) Business men and industrialists

Table No. 7-3

Number of Live-born Children per Married Couple classified by the Amounts Paid-in Business Profit Tax, National Tax, in the Cases of Small and Medium Business Men and Industrialists in Cities and Business Men and Industrialists in Agricultural Villages

	Small & medi- um business men & industr- ialists in cities	Business men & in- dustria- lists in agricul- tural vi- llages	Average
Exempt from taxation	4.02	3.85	3.88
under ¥25	3.88	4.09	3.99
¥25 - under ¥50	4.38	3.90	4.23
Over ¥50	4.19	4.67	4.24

3) Distribution of Number of the Degree of Production.

This is the observation of how the above-stated average number of live-born children, 4.64, is distributed. The figures are as follows:

Table

Table, No.8

- 30 -

Distribution of the Degrees of Production of the Married Couples after the Elapse of the Period capable of Pregnancy.

Number of live-born children	Real number of married couples	Percentage
0	2,665	14.55
1	1,238	6.76
2	1,292	7.05
3	1,567	8.55
4	1,854	8.55
5	2,035	10.12
6	2,127	11.11
7	1,883	10.28
8	1,529	8.35
9	1,072	5.85
10	684	3.73
11	239	1.30
12	98	0.53
13	25	0.14
14	10	0.05
15	-1	0.01
16	-	-
17	1	0.01
Total	18,320	100.00

- b) Distribution of Number of Degrees of Production Classified by Occupations.

Next, as to the differences according to occupations, the figures are as follows:

Table,

Table, No. 9

- 31 -

Distribution of Number of Degrees of Production classified by Occupations (%)

(1)

Number of live- born children	Salaried men in cities	Salaried men in ag- ricultural villages	Waged la- borers in cities	Waged la- borers in agricultu- ral villages	Farmers	Fisher- men
0	10.53	16.64	16.47	19.50	13.16	23.11
1	9.91	9.30	10.17	8.15	5.40	7.77
2	8.65	7.87	9.04	5.56	6.20	6.02
3	11.89	10.91	8.92	8.02	7.87	8.54
4	12.10	11.09	10.11	9.14	9.88	9.13
5	16.48	12.52	10.67	9.88	10.67	8.93
6	12.30	10.73	10.36	9.51	12.16	10.68
7	9.28	6.80	9.92	10.86	11.10	8.54
8	4.48	5.37	5.55	8.27	9.80	8.35
9	2.61	4.29	5.30	8.30	6.78	3.50
10	1.46	2.86	2.06	3.58	4.42	4.27
11	0.31	0.90	0.87	0.62	1.64	0.97
12	-	0.54	0.37	0.25	0.67	0.19
13	-	-	0.19	0.12	0.17	-
14	-	0.18	-	-	0.08	-
15	-	-	-	0.12	-	-
16	-	-	-	-	-	-
17	-	-	-	0.12	-	-
Total	100.00	100.00	100.00	100.00	100.00	100.00

The differences in distribution due to occupations and the differences in the average distribution under the preceding Table are clearly observed, but here, too, the differences by areas are remarkably indicated.

c)

c) Distribution of Number of Degrees, classified by Classes of Income.

The further observation on the preceding Table classified by classes of income results in as follows:

But the standard of the classification of the classes of income is the same as in the case of A.

(1) Salaried men in cities.

Table, No.10 Distribution of Degrees of Production classified by Classes of Income of Salaried Men in Cities. (%)

Number of live-born children	Under	¥50 - under	¥100 - under	¥150 - under	¥200 - under	Over ¥300
	¥50 under	¥100 ¥150	¥200	¥300		
0	1 -	11.72	9.46	14.77	11.47	7.63
1	16.67	9.38	12.16	8.72	11.47	8.02

6	12.62	7.05	8.50	11.41
7	5.83	9.61	9.15	7.61
8	3.88	4.49	8.50	7.77
9	5.83	3.21	5.88	4.60
10	1.94	3.85	2.61	2.85
11	1.94	1.92	0.65	0.48
12	-	-	-	0.48
13	-	-	0.65	-

(7) Business Men and Industrialists in Agricultural Villages

Table, No. 10-7

Table, No. 10-7

Distribution of Number of Degrees of Production of Business Men and Industrialists, classified by the Amounts Paid-in of Business Profit Tax, National Tax.

Number of live-born children	Exempt from taxation	Under ¥25	¥25 under ¥50	Over ¥50
0	24.42	21.18	19.44	16.67
1	9.35	7.06	4.17	5.56
2	8.05	8.82	11.11	6.94
3	6.49	7.65	11.11	9.72
4	9.61	10.59	15.28	9.72
5	9.35	11.18	9.72	9.72
6	7.79	8.23	6.94	9.72
7	8.57	7.06	9.72	9.72
8	7.01	7.06	4.17	9.72
9	4.42	4.11	5.56	2.78
10	3.12	2.94	2.78	6.94
11	0.78	2.94	-	1.39
12	0.78	0.59	-	1.39
13	0.26	0.59	-	-

The figures here being somewhat irregular, the differences due to the classes of income (For example, the high rate of sterility of the waged laborers in cities, in the class of ¥150 - under ¥200), the differences due to the classification by occupations are found, and, here also, the above-indicated differences by areas are remarkably found, more than anything else.
